

①

HTML 5 Test

① What is HTML:

* HTML stands for Hyper Text Markup Language. HTML is the standard Markup Languages used to create and structure web page.

* Headings * paragraphs * Links * images

* Lists * Table * forms * Audio
video * page * sections

* what does HTML stand for * semantic

* connects documents / webpages through hyperlinks.

 Home

Q. Why is HTML called Markup Languages

* HTML is called Markup Language because it uses tags to mark and structure content.

(2)

2) Is HTML a programming Language?

* No. HTML is not a programming Language.

* HTML is a markup language.

* HTML does n't provide programming concepts

* Variables * Loops * conditions * functions

* class

* HTML provides:

* Structure

content

meaning

* Ex: 1

<h1> welcome </h1>

<p> LEARN FullStack </p>

* Output:

welcome

LEARN FullStack

3) What is the difference between an HTML Tag and HTML Element?

A tag is HTML syntax written inside angle brackets.

* Example:

<p> </p>

* HTML Element

An HTML element is the complete

structure.

(3)

* Example:

```
<p> Hello world </p>
```

4) What is `<!doctype html>` an HTML

doctype is a document type declaration

```
<!doctype html>
```

It tells the browser to interpret the document using the modern HTML standard.

* doctype is:

* NOT a tag

* NOT a meta tag

* NOT an element

5. Explain the basic structure of an HTML document. What are the purposes of `<html>`, `<head>`, and `<body>`?

* Basic structure:

```
<!doctype html>
```

```
<html>
```

```
<head>
```

```
<title> Student page </title>
```

```
</head>
```

```
<body>
```

```
<h1> Hello students </h1>
```

```
</body>
```

```
</html>
```

(4)

<html> - Root Element

<head> - contains information about the webpage that is not normally displayed as the main page content

<body> - The <body> contains the content displayed on the webpage.

b) HTML Attributes

Attributes provide additional information about an Element.

Example:

<a href = "https://example.com" visit website

href is an attribute

7) Difference between Src & href

<u>Src</u>	<u>href</u>
Source of an embedded resource	destination/reference of a link or linked resource
<u></u> , <u><script></u>	<u><a></u> , <u><link></u>

8. Purpose of the alt attribute in an `<img>` tag:

*alt Attribute:

* provides alternative text describing the image.

``
It is displayed when the image cannot be loaded and helps screen readers understand the image.

9) ~~Block~~ *Block-level Elements

*Block level Elements normally start on new line and occupy the available width within their containing block.

*Examples:

*`<div>` *`<p>` *`<h1>` *`<h2>` *`<section>`

*`<article>` *`<header>` *`<footer>` *`<main>` *`<nav>`

`<h1> welcome </h1>`

`<p> Hello world </p>`

`<div> content </div>`

Separate line.

⑥

* Inline :

* inline element stay within the same line and occupy only the space required by their content.

* `<span>`

* `<a>`

* `<strong>`

* `<em>`

* `<b>`

* `<i>`

* `<small>`

* `<mark>`

10)

Semantic HTML

* Semantic element clearly describe the meaning / purpose of their content.

* `<header>`

* `<nav>`

* `<section>`

* `<article>`

* `<aside>`

* `<footer>`

* Examples :

`<html>` `<header>`

`<h1> Student form`

`</header>`

`<nav>`

`<a href = "#"> Home </a>`

`<a href = "#> about </a>`

`</nav>`

`<main>`

`<section>`

`<h2> Student </h2>`

`<p> welcome All </p>`

`</section>`

`</main>`

`<footer>`

(7)

* NON Semantic:

* Non semantic element don't describe the meaning of their content.

* Example:

* `<div>` * `<span>`

(ii)

difference between `<div>`

* `<div>` is a generic block level container.

```
<div>  
  <h2> student details </h2>  
  <p> Name: Riswana Barvin B </p>  
</div>
```

non semantic because the `<div>` doesn't describe the meaning of its content

* `<span>`

* `<span>` is a generic inline container.

```
<p>
```

```
  my name is <span> Riswana Barvin B </span>
```

```
</p>
```

it also non semantic.

1d) the different types of HTML lists

* :

unordered list

* Example:

 Apple

 Grape

 mango

Output :

- Apple
- Grape
- mango

*

ordered list

* Example:

 Apple

 grape

 mango

Output :

1. Apple
2. grape
3. mango

9

* <dl>

description list

<dl>

<dt> HTML </dt>

<dd> Hypertext Markup Language </dd>

</dl>

13. Explain the HTML table tags

* <table>

create a table

* <tr>

create a table row.

* <th>

create a table heading

* <td>

create a table data cell

* <thead>

groups the table header

* <tbody>

groups the table footer.

* Example:

<table>

<thead>

<tr>

<th> Name </th>

<th> Roll No. </th>

10

</body>

<tr>

<td>Rishwana B </td>

<td>20 </td>

</tr>

</tbody>

</table>

*output

NAME	AGE
Rishwana B	20

14) purpose of <meta charset = "UTF-8">

<meta charset = "UTF-8">

UTF-8 (Unicode Transformation format - 8 bit)

*Example:

<p>Good morning </p>

<p>12000 </p>

<p>@ </p>

*viewport

<meta name = "viewport"

content = "width = device-width, initial-

scale = 1.0">

make the viewport width correspond to the device view point width.

15) What is Open Graph (OG)? Explain the purpose;

OG - Provide meta data that social media platforms can use to create richer previews when a web page.

*og:title:

<meta property="og:title" content="my website">

*og:type:

<meta property="og:type" content="website">

*og:image:

<meta property="og:image" content=" " />

*og:url:

<meta property="og:url" content="https://example.com">

*og:description:

<meta property="og:description" content="welcome to my website">
